

Email Archiving

Email communication plays a vital role in business today. Many companies simply cannot function or will close down without email. Email is thus becoming a very valuable asset of the company. Business is looking at different ways to store and protect these email communications.

Sentry Enterprise Archiving is the perfect answer to today's data retention requirement. Unlike traditional appliance or software based system, Sentry Enterprise Archiving provides archiving solution using the innovative Software-as-a-Service (SaaS) model. With no hardware or software to install, company can easily start doing e-discovery and meeting legal or compliance requirements.

Quote

“Our research shows that the vast majority of enterprise IT organizations have been required to search through backups to retrieve one or more email messages in the past 3 years. Companies of all sizes should be archiving email, so they are prepared to meet the legal discovery, supervisory and retention requirements that impact them. On demand email archiving services are ideal for organizations that want to quickly deploy a solution without large upfront investments of capital or internal IT resources.”

- Michael Osterman, President, Osterman Research

Why Company Needs Email Archiving?

- Comply with statutory regulations – In HK, Hong Kong Personal Data (Privacy) Ordinance and Hong Kong Code of Practice on Consumer Credit Card Data both require relevant data to be retained for a certain period of time. In foreign jurisdictions, SEC and SOX impose severe penalties for non-compliance on data retention.
- Support litigation and avoid costly legal expenses - In litigation, the company is required by the Court to produce information relating to the case. Without an effective email archiving solution, the company might require paying millions of dollars to restore such information or may simply lose the case because of failing to produce evidence.
- Better storage management – According to Osterman Research, the email storage is growing at 37% annually. Most companies currently taming email storage growth by imposing quota limits on end users. However, the downside of it is affecting end users productivity and encouraging them to delete important emails when their mailboxes are full.
- Better knowledge management – Emails contain vast quantities of useful information which is often vital to a business. Staff turnover may also mean that this information will be lost if it is not properly managed. Email archiving system with sorting and searching capabilities will enable IT administrator to better manage this knowledge repository.

Features

- Unique rule engine allows you to create, maintain and enforce a clear corporate retention policy for incoming, outgoing and internal emails
- Works with any type of email system
- Web-based interface for fast searching and retrieving archived emails
- Archived emails are securely stored in multiple data center
